$\qquad$ Date $\qquad$

## Song Length Distribution

(1) Look up the 50 top songs on a music streaming service. Type each song's duration into a spreadsheet.
(2) Write a sentence about the data giving a measure of center and a measure of variability.
(3) Make a histogram of the data. (Use technology, or draw it in the space provided or on another sheet of paper.)
(4) Write a sentence describing the overall pattern of the distribution and any striking deviations from the overall pattern. $\square$
(5) Imagine that one year from now, you go back online and repeat (1)-(4). In what ways would you expect the data distribution to look similar? What differences would you expect to see?
